

Jeremy Scott

Professor Hillerman

GIT 414/514 Fall Session-A - 62919 | 76175

20 September 2026

Asset Inventory and Provenance Check

1. Images

ID	Purpose	Source	License/ Permission	Original Format	Current Format	Current Dimensions	Expected Display Size
Hero Image	Engagement	unsplash	Free creative use	PNG	WebP	1920 x 1080	1600px x 500px; 800px x 500px (cell)
Self-Portrait	Shows me On the about me page	Personal Picture	I own the rights to the picture	PNG	WebP	tbd	300-500px
HTML Tech Stack Icon	Displays Html experience	https://www.tech-stack-icons.com/	Free creative use	SVG	SVG		40-64px
CSS Tech Stack Icon	Displays CSS experience	https://www.tech-stack-icons.com/	Free creative use	SVG	SVG		40-64px
Javascript Tech Stack Icon	Displays JS experience	https://www.tech-stack-icons.com/	Free creative use	SVG	SVG		40-64px
SQL Tech Stack Icon	Displays MySQL experience	https://www.tech-stack-icons.com/	Free creative use	SVG	SVG		40-64px
Python Tech Stack Icon	Displays Python experience	https://www.tech-stack-icons.com/	Free creative use	SVG	SVG		40-64px

Instagram Icon	networking	https://simpleicons.org/?q=instagram	Free creative use	SVG	SVG		24-32px
Github Icon	Network/portfolio	https://simpleicons.org/?q=instagram	Free creative use	SVG	SVG		24-32px
Graphic Design project thumbnail	Preview of My graphic design projects	My own work	I own the rights	PNG	WebP	tbd	300-500px
Web Dev Project thumbnail	Preview of My web dev projects	My own work	I own the rights	PNG	WebP	tbd	300-500px

2. ALT Text Plan

- About me image | Informative | alt="Jeremy Scott"
- Hero image | decorative | alt=""
- Graphic Design Project Thumbnail | Informative | alt="Screenshot of graphic design project"
- Web Design Project Thumbnail | Informative | alt="Screenshot of responsive website design"
- HTML/CSS/Javascript/Python/SQL Icons | decorative | alt=""
- Social Media Icons | Functional | aria-label="Visit Jeremy Scott on LinkedIn/Instagram/github"

3. Media

- There won't be any audio on the site and for now, no videos. I will instead add transitions to the website like color transitions on buttons or making menus or cards slide over when hovered over which will be done using html/css.

4. Typography

Body

- Font: Inter
- Buttons and body text
- Source: Google Fonts
- License: SIL Open Font License
- Weights/style used: 400, 500, 600, 700
- Fallback stack: arial, helvetica, sans-serif

Headings

- Font: Poppins
- H1, h2, h3, special text
- Source: Google Fonts
- License: SIL Open Font License
- Weights/style used: 600, 700, bold
- Fallback stack: arial, helvetica, sans-serif

Loading Strategy:

- I will load Inter and Poppins via the `@import` at the head of my external stylesheet. For browsers that don't accept these fonts, I've included fallbacks for websafe fonts to be loaded instead.

5. Optimization risks

1. Project Thumbnail Images

- Since the screenshots for the graphic design and web development projects are going to be larger images by default, I plan to compress them and convert them into WebP. I'll also be incorporating srcset for my images so that smaller devices will use the smaller images and not need to load large images unnecessarily.

2. Project Cards and Card Content Images

- Images inside of the cards need to have srcset and smaller sizes as well so that they don't increase the load time for the site. Also, if the images aren't sized properly, it could cause the grid to look all funky and make everything shift out of place in the columns. For this reason, I will be defining the width and height of the images as they're included in the site to avoid this issue.

3. Google Fonts

- The fonts 'Inter' and 'Poppins' I'm using for the site are popular but not websafe so they run the risk of not displaying properly for certain browsers. To counter this issue, I've included a fallback stack of websafe fonts for those browsers that can't access these two fonts. I'll also test across multiple browsers to make sure the layout doesn't shift and do anything weird or unintended.

6. Evidence Plan

- **File size:** check image sizes and make sure they load correctly and don't slow down the site
- **Image dimensions:** check that the images I'm downloading are the right size for what I'm trying to have them displayed in advance.

- **Responsive behavior:** test images at mobile/tablet/desktop/xl display sizes via chrome devtools to make sure everything is adjusting correctly and that the right sized images are being loaded from the srcset so that the website isn't being bogged down as well with load time. I'll look for any kind of pixel distortion.
- **Accessibility:** I'll make sure every functional or informative image has the appropriate alt text and that decorative images have just alt="". I'll also do a keyboard test on the site to ensure that the focus indicators are present in the website for users without a mouse to navigate effectively.
